

# Security Certificate

---

We confirm that all devices in the Konica Minolta bizhub series, faster than 22 ppm and equipped with a GSM / GPRS modem or connected to the CS Remote Care system thru email – are properly protected against electronic piracy.

This protection also covers your prints, copies and scans made on these devices, because CSRC retrieves data only from the machine memory and cannot access data in the image memory or the optional hard disk drive.

Whereas software manipulation can never be totally excluded, it is normally impossible to gain access to a customer's networks via GSM, GPRS or email connections of Konica Minolta devices - as the CS Remote Care System uses a specific protocol for data transmission with the bizhub device.

Langenhagen, February 2007

Olaf Lorenz
